Objective: What we are aiming for?

We are developing an online rental application which caters :

- **Product renting services for both end users - lessee and renter**
- **Diverse and broad range of items.**
- **Easy, interactive, and user-friendly interface.**
- **Secure and liable renting system.**
- **Assured product safety.**

Purpose of the project

In today's world, there are several rental service providers such as Zoomcars, ONN Bikes, GoBikes, etc. providing car and bike renting services.

All such renting sites are limited only to a particular category and have a small scope for expansion.

There is no single-integrated platform that caters to all the necessary needs.

Motivation of the work

Due to the broken rental system, we tend to limit our item selection scope to a mere 2-3 options we have, even for our actual usage or needs.

Lack of awareness about the renting system, its usability, and the productivity boost it can give in diverse fields.

High expenses of purchasing something for a small usage.

Lack of resources and a proper dedicated platform for this service.

Why are we unique?

We are trying to build a single platform that has multiple items available for rent for diverse users.

Here, the users don’t have to manage the pickup and delivery of the items. It will be completely done and managed from our side.

We will ensure the proper security and condition of the rented product.

Project Timeline

Review-1

Selecting the project, checking its usability and scope, doing user surveys and analysing various projects of similar scope if available.

Review-2

Keeping in mind the survey progress report, working on basic architecture of the project, eliminating issues of already available projects.

Review-3

Working on the Front-end in detail and simultaneously working on its connectivity with the Back-end for smooth operation of the project made.

Review-4

At last, working on its external connectivity with other services like UPI, or other payment modes. Completion of project and presenting the final project made.

Module Split-up and Explanation

For the second review we analyzed the pros and cons of various projects of similar scope.

Eliminating the already available issues along with working on uniqueness of our project.

Working on the basic architecture of our project to further work on the idea.

Implementation of the ideas.

Existing Projects

There were a few websites we researched and we created how those websites are different from our SOLUTION!

- **Rent Furniture & Appliances || Rentomojo**
- **Rentit4me - Rental Marketplace | Give On Rent for Free Anywhere In India**
- **Fat Llama | Rent (almost) anything**

Rent Furniture & Appliances || Rentomojo

FEATURES

Available Rent for- Furniture's, Fridge, Washing Machine

Available for lease

REFER A FRIEND EARN MONEY- ----------GOOD THING!

DISLIKE

Showed everything on website but only contains Furniture that too limited for rent

WHAT WE CAN DO BETTER

- REFER A FRIEND EARN MONEY----------GOOD THING!
- We will add into our project.

- They must have been keeping things to themselves and deliver it when needed. But we will do something like OLX….We will connect the leaser and the take through our platform.

- Check that Tenure bar Design(We can take it) and they have a Refundable deposit.. Which we can incorporate as it will further increase bond's Genuity.

Rentit4me - Rental Marketplace | Give On Rent for Free Anywhere In India

- No One to Chat to when Logged In. The website is either dead or its using our data for 3rd party selling and profit generation.
- Security Deposit: This is a good feature which would help us reduce fraud users.

Fat Llama | Rent (almost) anything

By far the best Website from our Research List

Good UI! + Testimonial makes it look Genuine

Not operating in India
Currently operating only in the UK, US, and Canada

Suggestions: *from Phase-I*

- **Add a Refundable Security Deposit feature -**

It will increase customer trust, and also help in reducing fraud customers.

- **Add customer testimonials on the website -**

  It makes the website look genuine.

- **Add a Refer and Earn option -**

  A good way to advertise the site.

- **Add a Tenure bar on the product checkout page.**

Novelty of the project:

- Collection of matchless number of options on sole platform.
- Clear target audience (18-25 yrs age), as they are the majority user of this service.
- Fair and honest product info. with no false promotions.
- Reasonable amount.

Real time Usage

Everybody needs something occasionally that they don't own, but for a variety of reasons or constraints, they don't want to buy it. Second, it's likely that they won't find the object they were looking for or won't be able to borrow it from someone for the duration of time they need. Here's where we fit into this overall picture. With our rental application, we will help the client in this case.

We will provide:

- **Multiple options -** All accessible items will be exposed to the user, eliminating any restriction such as having limited alternatives.
- **Flexible time limit -** The user can freely select the time period to have the item for rent.
- **Stress-free usability -** During the time the product is rented, it will provide the user a sense of ownership. He or she can use the product without interruption or tension.
- **Product safety -** We shall guarantee the item's safety and security for the user renting it out.

Research and Review

What is easier for you, 'Rent the product you need for the required period of time at minimal price' OR 'try to borrow it from someone without any time period assurance'.

Copy

923 responses

how helpful would it be if we have a single rental application for various products?

Architectural Diagram

Databse Usage

Relation Database Management System(RDBMS): This is an RDBMS based project which is currently using MySQL for all the user data collection and database.

MySQL is an opensource RDBMS System. And this diagram represents how our Databse Server should be working.

Hardware requirements:

Ethernet connection (LAN) OR a wireless adapter (Wi-Fi)

Processor: Minimum 1 GHz; Recommended 2GHz or more.

Hard Drive: 2 GB or more.

Memory (RAM): 1 GB or above.

Software requirements:

FIRESTOTRE Database

We have used the FIRESTORE database to host the data.

HTML, SCSS, JS and ReactJS

We had made our own interacting platform which we would style with SCSS which is a pre-processor for CSS and for backend we have chosen JavaScript and ReactJS as our native language.

Project implementation and development progress

- **UI Development:** Completed initial layout and styling of UI elements. Implemented responsive design for better usability.

- **Backend Development:** Set up server environment using JavaScript and ReactJS. Developed APIs for user authentication and product management.

- **User Authentication and Registration:** Implemented user registration and login forms. Implemented client-side and server-side validation for user input.

- **Product Management:** Developed functionalities for adding and editing products. Integrated with Firestore database for storing product information.

- **Search and Filter:** Implemented search functionality and basic filter options. Currently optimizing search algorithm for better performance.

Project implementation and development progress

- **Booking Process:** Implemented booking forms and integrated with payment gateway for processing transactions. Currently working on updating availability status and recording booking details.

- **User Profile and Booking History:** Developed user profile pages to display rented products and booking history. Implemented functionalities for users to manage their bookings.

- **Payment Integration:** Integrating with payment gateways and tested payment processing. Currently refining error handling and ensuring security compliance.

- **Admin Panel (Optional):** Start development of an admin panel for managing products and users in upcoming days. Currently working on authentication and authorization mechanisms.

Project Modules

1) User Interface Development -

- Creation of UI elements using HTML and CSS.
- Designing navigation, product listings, search bar, and filter options.
- Implementing responsive design for optimal user experience across devices.

Project Modules

2) Backend Development -

- Setting up the server-side environment using JavaScript and ReactJS frameworks.
- Developing APIs for user authentication, product management, and booking process.
- Integrating with the Firestore database to store product and user information.

3) User Authentication and Registration -

- Implementing user authentication and registration forms.
- Handling user sessions and password encryption for security.
- Validating user input using JavaScript and server-side validation.

Project Modules

6) Booking Process -

- Developing booking forms for users to select rental period and provide payment details.
- Integrating with payment gateway for secure transactions.
- Updating product availability status and recording booking details in the database.

7) User Profile and Booking History -

- Creating user profile pages to display rented products, booking history, and payment details.
- Implementing functionalities for users to manage their bookings and profile information.
- Ensuring data privacy and security of user information.

Project Modules

8) Payment Integration -

- Integrating with payment gateways (e.g., UPI, PayPal, etc.) for processing rental payments.
- Handling payment callbacks and error handling during transactions.
- Ensuring compliance with payment security standards (e.g., PCI DSS).

9) Admin Panel (Optional) -

- Developing an admin panel for managing products, users, and bookings.
- Implementing authentication and authorization mechanisms for admin access.
- Providing insights and analytics on product rentals and user activities.

Project Modules

4) Product Management -

- Developing functionalities for adding, editing, and deleting products.
- Implementing category/tag management for organizing products.
- Updating product availability status based on bookings.

5) Search and Filter -

- Implementing search functionality to allow users to find specific products.
- Developing filter options (e.g., category, price range) to refine search results.
- Optimizing search and filter functionalities for performance.

CONCLUSION

The online product rental system is designed to revolutionize the way consumers access items, offering a seamless and efficient rental process. It promotes cost-effectiveness, sustainability, and access-based consumption by allowing users to rent a diverse array of products. Transparent transactions, smooth user experiences, and robust security measures foster trust and engagement. The system's versatility is evident in its potential applications across different industries, indicating its adaptability and broad adoption potential. Overall, it offers a novel approach to consumption, paving the way for a more efficient, equitable, and sustainable future.

RESULT & DISCUSSION

The project's product rental website offers a transparent, safe, and easy-to-use platform for renting goods, benefiting the general public in the process. It encourages community involvement, small business support, and sustainable consumption—all of which go a long way towards building a more diverse and ecologically conscious society.

On completion, major outcomes will be:

- **Accessible Platform for Renting Products**
- **Transparent Product Information**
- **Convenient and Personalized User Experience**
- **Secure Transactions**
- **Community Engagement**
- **Support for Small Businesses**
- **Product safety**
- **Contribution to the Sharing Economy**

ACKNOWLEDGEMENT

Firstly, we would like to thank our project supervisor, Dr. Shahab Saquib Sohail, and our reviewers Dr. Kamlesh Chandravanshi and Mrs. Shilpa Suman whose valuable guidance helped us to raise the project to the intermediate level and helped us to complete the 2nd Phase of the project.

Also, we would like to thank the VIT Management for offering this Project-based inter-disciplinary course.

Hope sir/ma’am will bestow his blessings on us in the future ahead and encourage us in this project.

Thank You!
